Getting Started

The command you just ran

Congratulations! You have started the container for this tutorial! Let's first explain the command that you just ran. In case you forgot, here's the command:

```
docker run -d -p 80:80 docker/getting-started
```

You'll notice a few flags being used. Here's some more info on them:

- `-d` - run the container in detached mode (in the background)
- `-p 80:80` - map port 80 of the host to port 80 in the container
- `docker/getting-started` - the image to use

Pro tip

You can combine single character flags to shorten the full command. As an example, the command above could be written as:

Table of

Question-2: Create a docker file for the job portal application and deploy it in docker application.

1)Creating a docker file for the job portal application

The screenshot shows the Visual Studio Code interface with a file explorer on the left and a code editor on the right. The file explorer shows a project named 'flaskapp' with files like 'app.py', 'app.pyc', 'Dockerfile', and 'requirements.txt'. The code editor shows the content of the 'Dockerfile' file, which is a multi-line command to build and run a Flask application using Python 3.10.6.

```
1 FROM python:3.10.6
2 WORKDIR /app
3 COPY requirements.txt ./
4 RUN pip install -r requirements.txt
5 COPY . .
6 EXPOSE 5000
7 CMD ["python", "./app.py"]
8
```

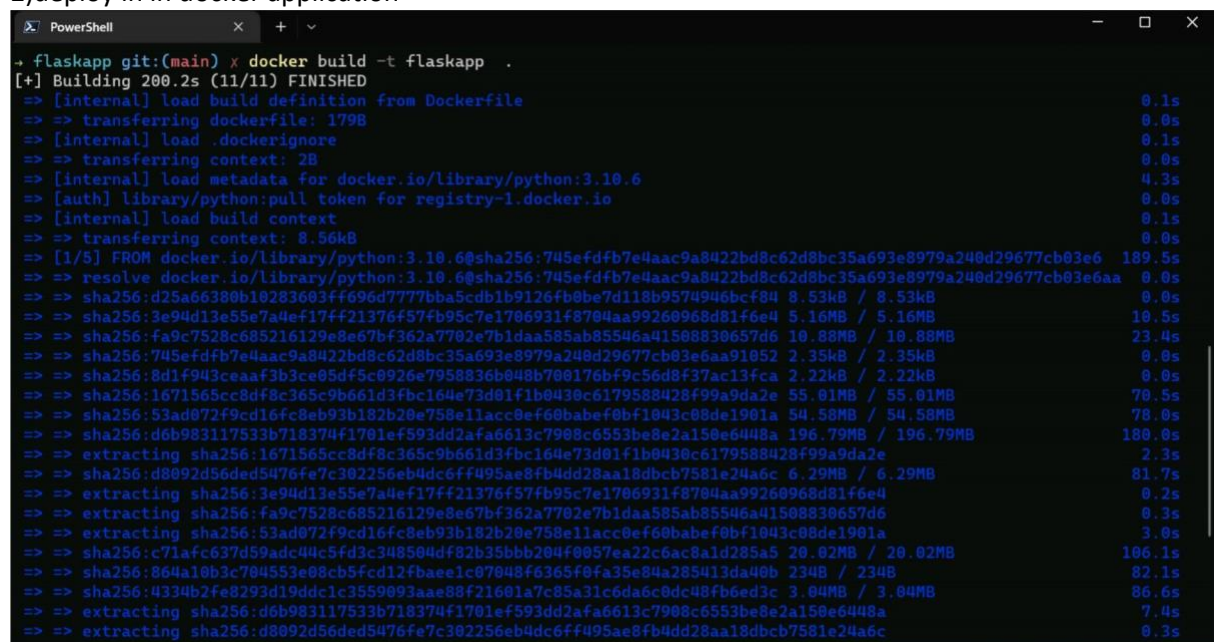

The screenshot shows a terminal window with the output of a Flask application. It starts with a warning message about using a development server. Then, it shows the application running on http://127.0.0.1:5000. The terminal output shows several GET requests and responses, indicating that the application is running successfully.

```
+ flaskapp git:(main) x flask --debug
unable to prepare context: path "flaskapp" not found
+ flaskapp git:(main) x flask --debug
Usage: flask [OPTIONS] COMMAND [ARGS]...
Try 'flask --help' for help.

Error: Missing command.
+ flaskapp git:(main) x flask --debug run
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
* Restarting with stat
* Debugger is active!
* Debugger PIN: 160-502-960
127.0.0.1 - - [05/Nov/2022 10:54:17] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [05/Nov/2022 10:54:18] "GET /favicon.ico HTTP/1.1" 404 -
127.0.0.1 - - [05/Nov/2022 10:54:20] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [05/Nov/2022 10:54:23] "GET /create/ HTTP/1.1" 200 -
127.0.0.1 - - [05/Nov/2022 10:54:26] "GET /create/ HTTP/1.1" 200 -
```

2)deploy in in docker application

The screenshot shows a PowerShell terminal window with the output of a Docker build command. It shows the progress of building the Docker image, including the transfer of the Dockerfile, the transfer of the context, and the transfer of the build context. The build process is completed successfully, and the resulting image is ready for deployment.

```
+ flaskapp git:(main) x docker build -t flaskapp .

Question-3:Create a IBM container registry and deploy hello world app or jobportalapp

1) create a IBM container registry

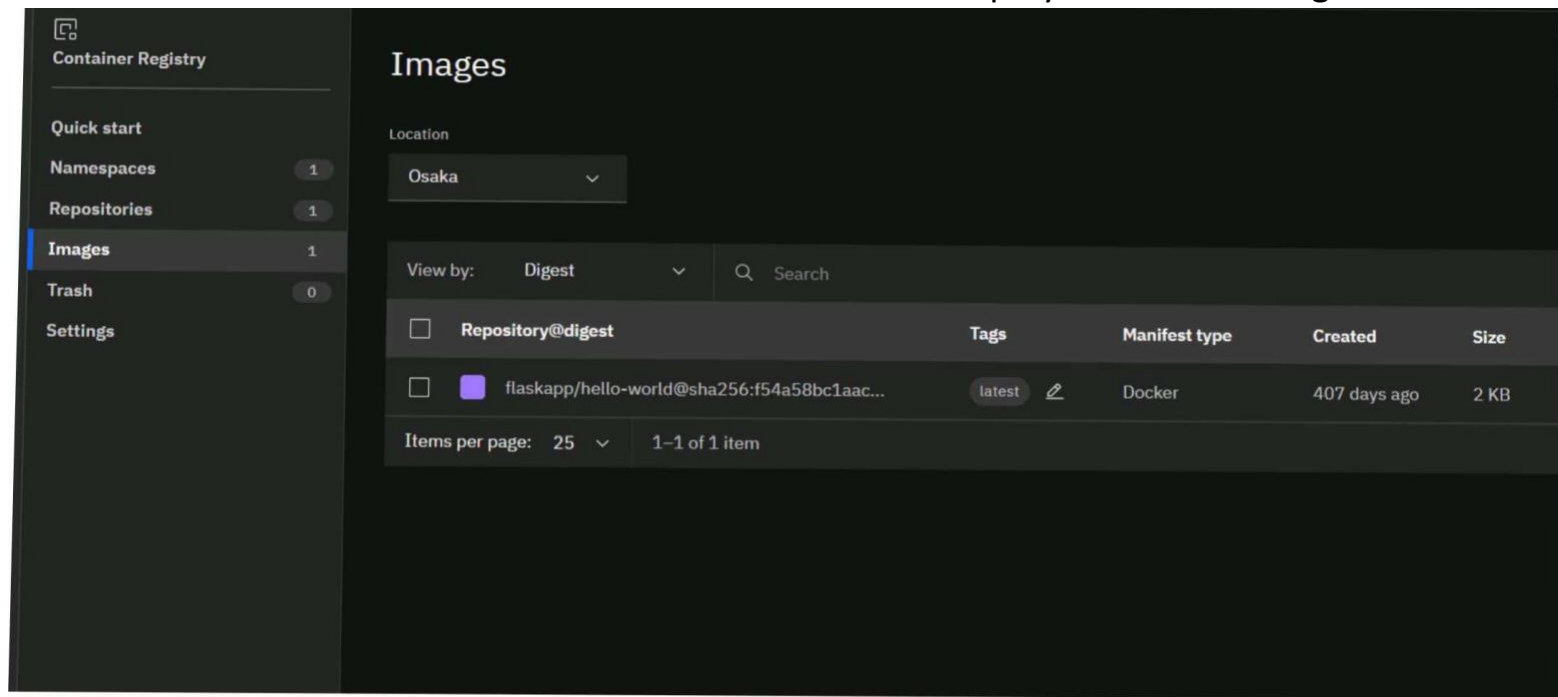

```
→ ~ git:(main) x ibmcloud
NAME:
  C:\Program Files\IBM\Cloud\bin\ibmcloud.exe - A command line tool to interact with IBM Cloud
  Find more information at: https://ibm.biz/cli-docs

USAGE:
  [environment variables] C:\Program Files\IBM\Cloud\bin\ibmcloud.exe [global options] command [arguments.
  ptions]

VERSION:
  2.12.1+b8488a1-2022-10-31T15:08:10+00:00

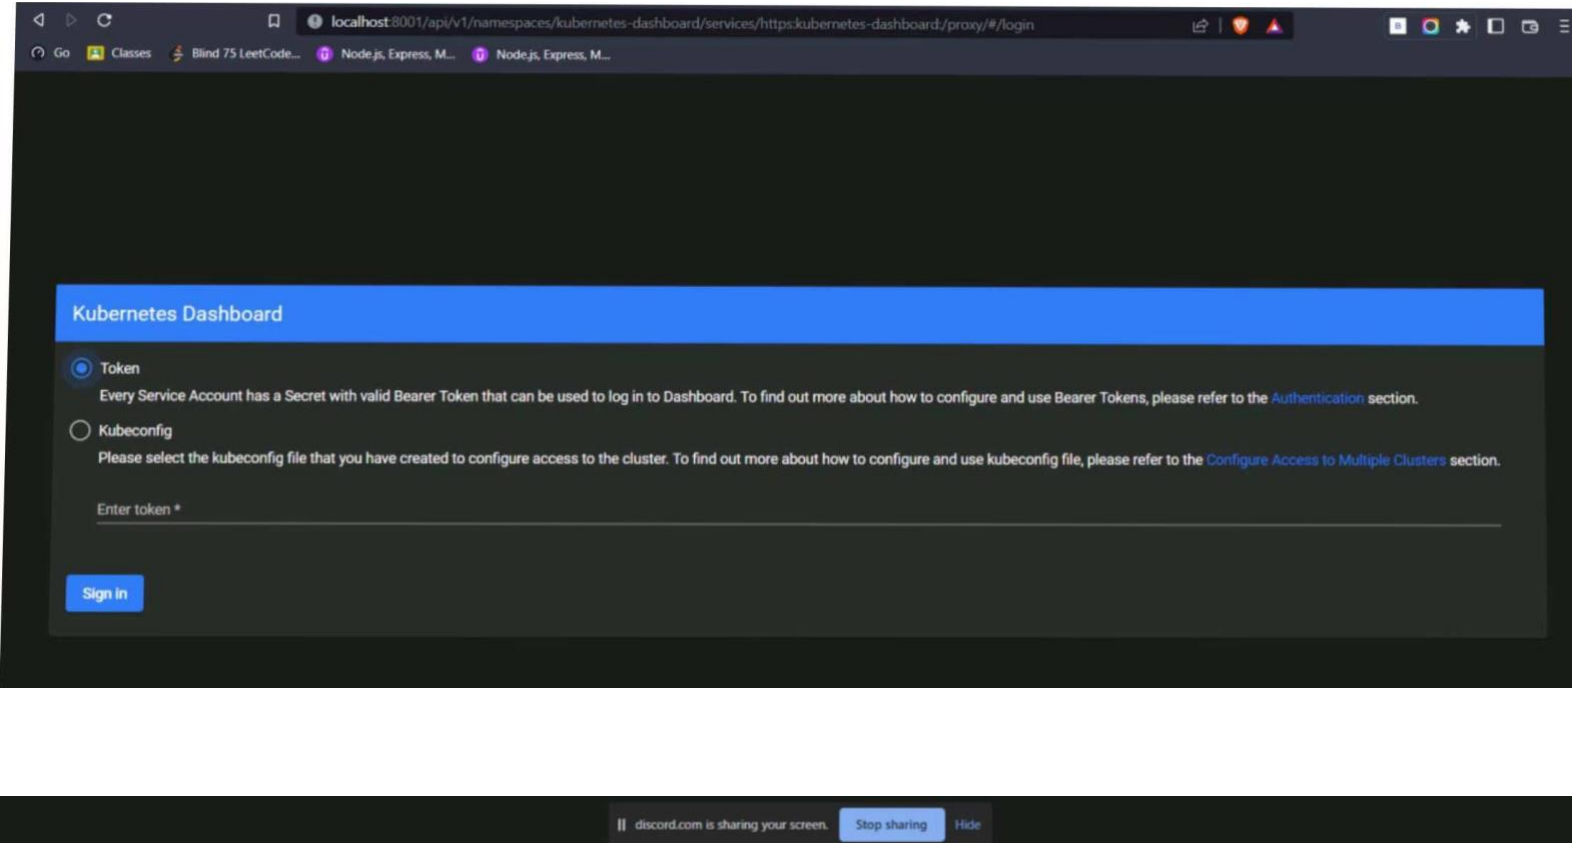

COMMANDS:
  account      Manage accounts, users, orgs and spaces
  api          Set or view target API endpoint
  billing      Retrieve usage and billing information
  catalog      Manage catalog
  cf           Run Cloud Foundry CLI with IBM Cloud CLI context
  config       Write default values to the config
  cr           Manage IBM Cloud Container Registry content and configuration.
  dev          Create, develop, deploy, and monitor applications
  enterprise   Manage enterprise, account groups and accounts.
  iam          Manage identities and access to resources
  login        Log user in
  logout       Log user out
  plugin       Manage plug-ins and plug-in repositories
  regions      List all the regions
```

Question-4: Create a Kubernetes cluster in IBM cloud and deploy helloworld image or

jobportal image and also expose the same app to run in note port

1)Creating a Kubernetes cluster in IBM cloud
